OJT Weekly Report

Week No. 3
Date: June 28 – July 2
No. Hours Rendered: 10.43 hours

TASK PERFORMED

DAY 1

On this day, I've given a project task to fix the search bar of the company's website. And I inputted a new contacts and removed old contact. As well as removed and add new hyperlink.

Day 2

I report what task I've finished and I haven't finished, then today is to review a particular site which is **noynoy-aquino.com** and add some changes. Unfortunately, we had a power outage so I don't know if the changes that I work on is working.

Day 3

On this day, I'm still figuring it out what should I change and for now I debugged the home page (index.html) that's the first one should be debug because there's many padding, margin, color, and text are unnecessary.

Day 4

I informed the supervisor if there's an error. It seems like I didn't noticed that the main page (index.html) has not a news and blogs before I sent it to my supervisor. The red rectangle, it indicate that it doesn't have a content, it just a title cover.

Day 5

I'm almost done with the task, but there's a page that does not working. The deadline of this project is until Tuesday. Here's the changes that I made on this task. As you can see, I moved the navigation bar, I also added a logo at the left side.

Proof:

Also I changed the design of footer, the left side is the original, the right side is my sample design.

OJT Weekly Report

Week No. 4
Date: July 5 – July 9
No. Hours Rendered: 13 hours

TASK PERFORMED

DAY 1

When I'm done finishing the webpage, I uploaded it on a hosting site to make sure if it's working. Then I submitted to the supervisor.

Day 2

Then, the next day the supervisor mentioned that the shoutbox doesn't has a widget feature which is why the message was overlaping. So research it again to find another shoutbox.

Day 3

The instructions that the supervisor said was to revert it to normal which is impossible because the moment I tried to access with that shoutbox, my ISP was blocked by that shoutbox and also with other devices.

Day 4

Today, I found a shoutbox. First I created an account to have an access then after that I checked if it's able to embed that shoutbox. After that I designed it using css. And import some existing messages.

Day 5

This Friday, I tested it out if the message would overlap if I expand the width and the height. Fortunately, it can! It has a widget feature. So I quickly uploaded it to hosting site then it's working finally.

OJT Weekly Report

Week No. 5
Date: July 12 – July 16
No. Hours Rendered: 13 hours

TASK PERFORMED

DAY 1

A new work was presented to me, and it follows the same approach as the prior website, fixing any issues that were not functioning properly. And do some technical stuff.

Day 2

Then, I approach my co-trainee and help them on what task have assigned to them.

Day 3

The instructions that the supervisor said was to monitor their ongoing task which is to develop as same to mine. And I suggest opinions to speed up their work.

Day 4

After that, the main website which infomaninc.com has dead links. I track and locate those dead links and create a new link.

Day 5

The next day, I do the same technical support and monitor the co-trainees and answer their question regarding on their task.

School of Computer Science
OJT Weekly Report

Week No. 6
Date: July 19 – July 23
No. Hours Rendered: 13.33 hours

TASK PERFORMED

DAY 1

We conduct a skype meeting to discussed our task, assignments and also suggest on what to improve. After a meeting a new task was assigned to me, which is the same procedure on the previous website, fixed any errors that's not functioning. I didn't start immediately because I'm having lost of connection, I'm actually using a data connection for this internship.

Day 2

The first thing I did at kimchiu.org was to re-designed the layout and UI, I changed the background, pictures, biography, etc. I also added a slideshow for header. And change the current shoutbox because is not working, as well as the rss-feed.

Day 3

Whenever I added some changes, I quickly upload it on hosting site because when you differentiate the one you uploaded on hosting site and the source file on your desktop, the results sometimes is different, usually the spacing is not the same, on top of that there's a missing pictures especially the words, for example like this letter "Ñ" when you run it on a hosting site that letter will not show up instead it will display other words, why's that happening it's because there's actually a code for that, it should not paste it like we usual do.

Day 4

After I finished the new design, I sent it to supervisor. So what happen? Well, unfortunately the supervisor was not satisfied. I revert it back to the original design then I just did minor changes.

Day 5

When I submitted the prototype, The supervisor says that I should have change the old videos then copy and replace it a new videos. I don't know if this is right but anyways I just did what the supervisor instructed to me. The left side picture was the design that I've made and In the right side is the original design.

Week No. 7
Date: July 26 – July 30
No. Hours Rendered: 14.5 hours

TASK PERFORMED

DAY 1

After the supervisor was done checking the kimchiu.org, I uploaded the files on ftp server. So that the changes that I've made would be applied. I encounter minor problems like the .jpg on compiler should be bigger ".JPG" if you want to upload it on hosting site then when I try to upload on ftp server the extension should be smaller ".jpg"

Day 2

Since the ftp server is not accepting except only the local ip address. That being said, the ip address within my data is not acceptable which is why it's very difficult to me because I'm using only a data. So it takes 2 days after I uploaded all the files.

Day 3

On day 3, Since I'm finished with the website for the fanpage. I have a task which is change the current phone number for the main site and also fix the search bar. Since this site has a big files, I initially find first a hosting site because the one that I'm using is not accepting for PHP files.

Day 4

First, I change the number because the current sun that their using was not working

then I tried to find if there's alternative for the search bar. It comes to my mind that if it's okay to use the embedded google search engine. It works though then I manually added a css to match the color of the site.

Day 5

I uploaded at 000webhost.com to see if there's an error. And I also used this for checking purposes. After the supervisor approved, I sent the only the file that's been updated. The first 2 images is the old site that have old search bar and doesn't have a new number. The last 2 images have new search bar and as well as new number.

OJT Weekly Report

Week No. 8
Date: August 2 – August 6
No. Hours Rendered: 9.50 hours

TASK PERFORMED

DAY 1

My next task was the same from kimchiu.org, fix any errors of robinpadilla.org. The site was generally okay and well designed. I initially tour myself and see what should I improve.

Day 2

Today while I'm searching things on the web for the site, we heard an explosion and after that we had an outage.

Day 3

I uploaded the files to hosting site and see if the changes was applied. After that I sent to the supervisor and he said that the blogs was so long, then I fixed it, I just changed the number of RSS Feed that will display.
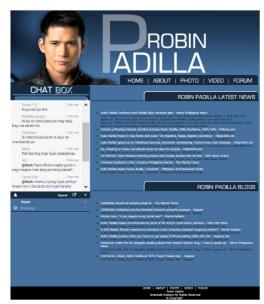

Day 4

Since the site has a shoutbox but it's not working like the other site before. So I created a new account for robinpadilla.org to have an access and get the embedded script. I change the inteface and match it on the color of the site.

Day 5

After I sent it to the supervisor, I should have improve the photo gallery, As of now I'm searching what I can added with that. Anyways, the images below is the screenshot for before and after. As you can see the left side doesn't have RSS feed whereas the right side has it. On top of that, the shoutbox much more complemented on the right side. Also, if the site on the left side entered on other devices then shoutbox will not show up, it's empty.

Week No. 9
Date: August 9 – August 13
No. Hours Rendered: 9.33 hours

TASK PERFORMED

DAY 1

After I submitted the project that I had. I also fixed the photo gallery of that fan website. Because when I clicked the image the popup was still smaller instead it should be bigger image.

Day 2

The next day, I tried to save images as many as I should because all of the photos in the index directory was small.

Day 3

Btw, I have a new task which is to improve the google rating of company's website. After the deep searching on how can I do what have told me, It seems like this is SEO type. Since this is new to me, I watched videos, read articles and etc.

Day 4

For the mean time, I submitted again the mock up sample for robin padilla's fan site. And I'm waiting to send it to me the credentials for FTP server.

Day 5

As of today, I'm still searching on how to improve the google rating of the main site. I know why google ratings is so important it's because the more high number of your rating, then the more business owners will recognize to your site and more customers will try to engage with their customers. For now, I'll show the photo gallery. The left side is the original and all of the images is smaller whereas the right side, I just enlarge the sizes because nowadays people browsing using an android phone.

Week No. 10
Date: August 16 – August 20
No. Hours Rendered: 10 hours

TASK PERFORMED

DAY 1

We had meeting on skype, and my supervisor presented he's screen with their website. Discussed about what I submitted last week, since he said it's good however I should have improve it so it can attract more audience. Then after I successfully completed uploading the photos to the website. I filed a report and sent a mockup to the supervisor for review.

Day 2

What I'm going to do now is work on improving our primary website's Google ranking. This type of assignment is new to me because I primarily do some coding and website design. As a result, this is similar to SEO, but the supervisor stated that it was to provide a review, so for the time being, it's just writing a review.

Day 3

I informed my supervisor that I should focus on updating the robinpadila.org then after that I used cmd to transfer the files. When I tried to login my laptop's IP address was not accepted by the ftp server. Because it only accept the default ISP IP address.

Day 4

The next day, I used an open-source FTP application. It's called FileZilla, It's so

convenient to transfer files especially if you have bigger files for your websites. Then, I started to drag the folders into the dashboard where the website files are located. And It's done.

Day 5

The next step is to double-check our main website for any remaining mistakes. In addition, I have a list of websites that should be checked to see if they are functioning and if they require maintenance. Anyway, the first picture shows an attempt to use cmd to connect to the FTP server, however it fails due to the IP address. The last image shows how to easily upload local files to an FTP server. All you have to do is to drag and drop.

TASK PERFORMED

DAY 1

My main task today is to check the list of websites that my supervisor provided to me if those are working or not.

please check which one is working and which
one needs editing : efrenpenaflorida.org
gagalady.org
meganfoxforum.com
melaicantiveros.com
melisacantiveros.com
angelinequinto.com
WOWOWIN.COM

Day 2

After I checked all of those websites, I reported that only two websites' were working and need to edit because their shoutbox and RSS feed are not functioning.

Day 3

When I'm done fixing and re-organize, I also uploaded the files from my hosting site to create an accessible url, I mainly used github because it super easy to upload, you'll just drag and drop the files and you're good to go.

Day 4

The next step, the supervisor ask me if possible to re-design and make it the same design like the robinpadilla's home page, yeah it's possible then I changed it accordingly on how it look like on the other websites that I fixed.

Day 5

The last thing I should do, is to changed the about page because honestly it's not quite good. And also the video page should add new video related to who's the image of the website. The First image was the original design, then the second is the new one.

Erl Bryan Malindog   Carlos Lim

Arellano University

School of Computer Science
OJT Weekly Report

Week No. 12
Date: August 30 – September 3
No. Hours Rendered: 6.5 hours

<u>TASK PERFORMED</u>

DAY 1

Today, I tried to check if there's part that I should improve for that fan website. I minimal added a css for the home, about and video page.

Day 2

This day is my schedule for my 1st dose of covid19 vaccine.

Day 3

I take a day off because my body experienced mild side effects.

Day 4

When I'm done resting, I resume my work on uploading the files using FTP with a third party software. I didn't used cmd for uploading the files because I took me hours when using it.

Day 5

After that, my next task is also fix the angelinequinto.com because the rss feed is not working as well. And other page of that fan website.

PS: The picture below is the third party that I'm using which is Filezilla. It's really convenient to used because you only have to do is drag and drop the files.

Arellano University
School of Computer Science
OJT Weekly Report

Week No. 13
Date: September 6 – September 10
No. Hours Rendered: 11.50 hours

TASK PERFORMED

DAY 1

My next task was to correct any errors on angelinequinto.org, which was something I learned from melaicanteveros.org's and my previous assignment. In general, the site's layout and design were excellent. To begin, I explore myself to determine where I can use improvement.

Day 2

For now, I'm browsing and searching what images would I add to photos page, Normally, I download from 20 – 25 pictures that will be added to that page.

Day 3

Since the site has a shoutbox, but it doesn't work like the other site, not to mention the RSS feed doesn't work either. So I made a new account on angelinequinto.org to gain access and obtain the shoutbox's embedded script, and I then modified the RSS feed's code.

Day 4

As is common practice, I create a folder on github for my sample code and then drag the files into it to compile and publish it.

Day 5

After changing the numbers in the RSS feed, Normally, the number of links was around 10 – 12 news articles, so I changed it to 5 articles. Then I uploaded using FTP third party software. and publish it. See the sample below.

Proof:

Prepared by:

Malindog

Erl Bryan Malindog

Supervisor's Signature:

Carlos Lim

Week No. 14
Date: September 13 – September 17
No. Hours Rendered: 9 hours

TASK PERFORMED

DAY 1

Today, my primary objective is to verify whether or not the websites on the list
provided by my supervisor are functional.

belenechandia.org
survivorphilippines.net
pinoyfearfactor.com
bottega-veneta.org
marcjacobsfan.com
survivor-philippines.com
ejayfalcon.org
christamiller.info
pinoyfearfactor.org
wowowee.info
geraldanderson.org
annecurtis.org
laarnilozada.org
majasalvador.info
alzaidi.org
charice-pempengco.org
jommyteotico.com
jctiuseco.org
willierevillame.org
tedfailon.com
marroxas.org

Day 2

From the list above, only 3-4 websites are working, so I chose geraldanderson.org as my next
target. As usual, I will fix the RSS feed, the shoutbox, the photos, etc.

Day 3

To create an accessible url, I uploaded the files from my hosting site and then fixed and reorganized them. I primarily used github because it was so simple to upload; you just drag and drop the files and you're done.

Day 4

Because the index directory contained only a small number of photos and, at the same time, the photos were old, which meant the artists on that page were young, I made an effort to save as many as possible.

Day 5

Once again, I made use of FTP third-party software to get things done. I didn't use cmd to upload the files because it took me hours to do so with that method. As you can see, the banner of this website was updated because I edited it. The recent banner was old.

School of Computer Science
OJT Weekly Report

Week No. 15
Date: September 20 – September 24
No. Hours Rendered: 11 hours

TASK PERFORMED

DAY 1

Today, my main goal is to make certain that the websites on my supervisor's list are fully operational.

belenechandia.org
survivorphilippines.net
pinoyfearfactor.com
bottega-veneta.org
marcjacobsfan.com
survivor-philippines.com
ejayfalcon.org
christamiller.info
pinoyfearfactor.org
wowowee.info
geraldanderson.org
annecurtis.org
laarnilozada.org
majasalvador.info
alzaidi.org
charice-pempengco.org
jommyteotico.com
jctiuseco.org
willierevillame.org
tedfailon.com
marroxas.org

Day 2

The next site is annecurtis.org, I start to view the design to see if the problem is the same as in my previous project. Upon checking, it's really the same so that I'll arrange the folder at my hosting site to fasten the uploading.

Day 3

As asual, I fix first the orientation of the site because it's not centered. And then I add new code for RSS feed to make it functionable.

Day 4

Since the photos are old, I downloaded new photos of Anne Curtis, and then I encoded to become visible. I also added new videos of Anne, and once again, I created a new shoutbox and uploaded it to the hosting site to make a sample.

Day 5

After that, I changed the banner because she appeared so young on it. I collected photos of her and edited in Photoshop.

alzaidi.org
charice-pempengco.org
jommyteotico.com
jctiuseco.org
willierevillame.org
tedfailon.com
marroxas.org

Day 2
Day off/ 2nd dose
Day 3

The next site is willierevillame.org, Of course I just did what I usually do. First things first, I created 5 html files for home, about, photos, videos and forum page. The next

one, I focus on the home page because that's the main objective there to have a working home page. I create a RSS feed for the news and blogs.

Day 4

Then after that, I created a gmail account for that website, so I can easily create a shoutbox. I imported some messages to look real that there's a really person or people go there and talking to each other.

Day 5

Then, I design the shoutbox to make compliment to the theme of webpage, then I insert it on webpage and use the iframe tag and assign to the left side.

<u>TASK PERFORMED</u>

DAY 1

When I'm done with the home page, I focus on the about page. I import again the iframe tag so that I can adjust the width and height of Wikipedia.

Day 2

Then, I collect some photos of willie for photo page that I can display. I just download 5-10 photos, arrange and balance the width and height.

Day 3

And also I collect some videos for willie on Youtube. Again, I use the iframe tag so it can view and display on that page.

Day 4

The last thing, I insert the shoutbox to the forum page and I resize to 100%. And also I already changed the cover photo as you can see willie looks more matured than the old version.

Day 5

Since I'm done with the pages, my supervisor requested if possible that the images

will automatically update if there's something new on Willie Revillame. I just said that it is not possible however I need a premium RSS feed because it has a features that can automatically update what person I input. Also it can achieve if I know how to create an CMS or Content management system. Nowadays, like bbc, cnn news etc. They're using CMS for their content. I don't know if my supervisor understand it. But still he says to me that google it. I have no choice. It's beyond of my knowledge. So I just search the whole day, and I just use the RSS site that has a features that can display the photos of a person that can automatically update if something new pops up. However, this feature is limited for 7 days because it's free, it needs to be premium so it can last longer.

OJT Weekly Report

Week No. 18
Date: October 11 – October 15
No. Hours Rendered: 12.8 hours

TASK PERFORMED

DAY 1

I start with basics, just download the file of next web page. I collect the home page first and also the information on what the inside.

Day 2

Then, I edit the pictures of mar roxas, because he's the cover on this web page. After that I add some information in about page of mar roxas using Wikipedia.

Day 3

And I create new file for photo section wherein that photos should update what's new on mar roxas.

Day 4

When I finished the photo page, Move on to the video page which is to collect videos of him in different sites.

Day 5

The last thing is the forum page, which is to create a shoutbox. I use the cbox for this web page so that I can import some message about mar roxas. This is troublesome because I'm lacking some information that I can add to forum page. I don't have clues where I can get the messages, What I do is to search on facebook and try find message about mar roxas and also try to paste the link of cbox on the comment section then if a person click it they will redirect to cbox of mar roxas and they can type anything about mar roxas.
